TOP NEWS OF THE MONTH

▶▶▶ BACK BY HIGH DEMAND: MIKE'S CULTIVATION CLASS

For the many who have been inquiring about Mike's Cannabis Cultivation Class, registration is now open! This introductory class focuses upon personal cultivation techniques and covers an array of fundamental topics. Attendees are able to ask Michael Jernigan, Master Gardener and Grower, specific one-on-one questions. Those who attend class will receive 10% OFF anything in the store, after class (valid ONLY on class date). The next class date is Wednesday, January 24, at 7:15 p.m.

HAPPY HOLIDAZE: STUFF THEIR STOCKINGS WITH SH!T! ◀◀◀

Whether they're naughty or nice, stuff their stockings with Sh!t, this year! Fish Sh!t is the ultimate gag gift for the gardener/grower in your life, that is also functional! By introducing a wide variety of beneficial bacteria and microorganisms in to the rhizosphere, Fish Sh!t creates an optimal symbiotic relationship between plant and soil. Mention this ad and receive 5% off until Christmas Eve.

**Beau-Dog not included.*

VEGETATIVE GROWTH (PHOTOPERIOD)

MARY, MARY, QUITE CONTRARY; HOW DOES YOUR GARDEN GROW?

YOU GROW, GIRL!

- When plant is about 3-4 weeks old, transplant seedlings into bigger pots with well fertilized soil - we recommend beginning with FoxFarm Happy Frog or Roots Organics soil and, eventually, up-potting into FoxFarm Ocean Forest soil. Sprinkle Mycorrhizae, such as Great White or Mykos, directly on roots during transplant.
- Water thoroughly and only water when the soil is dry. Make sure to water until you see run-off -- soil that is dried out too much becomes hydrophobic.
- You may start to feed your plants a vegetative fertilizer according to the instructions listed on the bottle.
- Veg your plants until desired height is reached. Leave room for plants to double in size during flowering stage.

MIKE'S PRO-TIP

In the vegetative stage, if you're running HID lights (MH, HPS, CMH), you'll want to run slightly lower temps (between 72 and 78 degrees Fahrenheit) due to these lights having more IR and UV. If you're running LED lights, you'll want to run slightly higher temps (between 78 and 82 degrees Fahrenheit) due to less IR. Humidity levels for any kind of light will stay between 60-70% for vegetative growth.

- Please note: CO2 supplementation requires higher temps and heavier feeding schedules.

HIGH GOALS

- If your plants are outgrowing pots, transplant into larger pots before the bloom stage.
- In a 5x5 grow area, we recommend growing 4 plants in 10 gallon containers or larger.
- The goal is to have stems from wall to wall for a maximum yield.
- Once your tent is 3/4 full, it is time to switch your light cycle for flowering -- 12 hours on and 12 hours off to begin Day One of flowering.

Vegetative Must-Haves:

- FoxFarm Happy Frog Soil
- FoxFarm Ocean Forest Soil
- Roots Organics Soil
- 1-3 Gallon Pots
- 5-7 Gallon Pots
- Great White
- Mykos
- Recharge
- Fish Sh!t
- BuildASoil Aloe Flakes
- BuildASoil Quillaja Extract 20
- Vegetative Fertilizer
- Low Stress Trainers

The Cool Cure is designed to consistently deliver the perfect drying, curing and storage conditions for your harvest. This environmental equilibrium protects and preserves terpenes and potency.

AC Infinity Bud Bowl Trimmer

A manual bud trimming machine designed to produce finely groomed herbs and flowers with precision. 16 and 19 inch models available.

APRIL'S GARDEN RECIPES

SOUTHERN - STYLE COLLARD GREENS

▶▶▶ WHILE VISIONS OF COLLARD GREENS DANCED IN THEIR HEADS

Shhhhhh, April's TOP SECRET Collard Greens recipe is yours to keep!! This legendary dish will quickly become the talk of your Holiday gatherings. To prepare, combine all ingredients in a slow cooker. Cover and cook on LOW for 9 - 10 hours. Remove ham hocks from the crockpot and thoroughly remove all fat and bone before returning meat to slow cooker. Stir into greens and serve.

INGREDIENTS:

- 1 lb Smoked Ham Hocks*
- 2 (14 oz) cans Chicken Broth*
- 2 lb Collard Greens, chopped fresh*
- 1/2 cup Sweet Onion, chopped*
- 2 tbsp Light Brown Sugar*
- 2 tbsp Apple Cider Vinegar*
- 2 tsp Kosher Salt*
- 1 tsp Crushed Red Pepper*
- 1/2 tsp Black Pepper*

BEAU'S TOP 10 RESOLUTIONS FOR 2024

▶▶▶ MAKE THIS A YEAR TO GROW!

1. If you're not a Gardener, become one! Visit me at Peninsula Hydroponics for tips, tricks, and nose-kisses.

2. Sign up for a Cultivation Class with my best buddy, Mike - Master Gardener and Grower.

3. 'Fertilize your plants' with Worm Castings and other amendments, like Bone Meal....did somebody say BONE?!?

4. Prepare for pests -- develop and institute an Integrated Pest Management plan for your indoor and outdoor gardens. My veterinarian says prevention is key!

5. 'Wet your plants' with a wetting agent. This helps spread the IPM product more evenly, allowing you to use less.

6. Did somebody say 'TREATS'?! Crack open this cookbook and enjoy a cannabis infused treat!

7. Start a vegetable and herb garden -- and, most importantly, be sure to taste test ALL produce!

8. All of the customers wish they could clone me...Instead, clone a plant.

9. Begin checking the pH of your water. My best buddy, Mike, even tests the pH of my drinking water!

10. Having only one tent to try and do it all is RUFF!! Take your grow game to the next level by having one tent (ideally a 4x4 or bigger) as your flowering tent and a separate tent (2x2, 2x4 or 3x3) as a veg tent! Make optimal use of your grow space and have a perpetual garden year round!
